

FIRESTONE/SPARTANBURG KEG PIN LOCK CONVERSION KIT

This kit will allow you to convert a Firestone or Spartanburg Challenger V, VI, or Super Challenger pin lock keg to ball lock. It will not fit Firestone kegs that were originally ball lock (which have different post threads), or Firestone models previous to the Challenger V. It will not fit kegs stamped 'THE CORNELIUS CO., ANOKA, MINN'

Conversion Instructions

Unscrew the Gas In Pin Lock Post (the one with two pins) with a suitable pair of pliers and remove. Now pry up the gas dip tube and remove. Replace the O ring on the gas dip tube with one from this kit. Reseat the gas dip tube with its new O ring. Now put the poppet valve into the Gas In Side fitting (the one with the notches in the side) and screw the fitting onto your keg post with an 11/16" (or 17mm) wrench. Repeat for the Beer Out Side (the one with the pin lock fitting with three horizontal pins), installing the post with the smooth sides.

Packing List:

- 1 P86 Notched Gas Post
- 1 P57 Smooth Beer Post
- 2 L92 Poppet Valves
- 2 D89 Firestone Dip Tube O rings
